Work, Youth, and Schooling

Historical Perspectives on Vocationalism in American Education

Edited by Harvey Kantor & David B. Tyack. Early in the 20th century, vocational education was seen as a promising solution to many of the nation's social and economic problems. But ensuing reforms had disappointingly small effect, and today our doubts about the effectiveness of schools in preparing America's youth for work have never been greater. Did vocational education go wrong? Or were the problems so deep-rooted that the schools could not solve them? To answer these questions, the authors present nine essays that cover all aspects of vocational education in America, from changing economic and political considerations and the role of federal legislation, to the theoretical links between schooling and work, the special problems of vocational programs for blacks and women, and directions for future research. $28.50
